# Declining Mortality (Increasing Longevity): At What Rate? 

# Steve Goss Office of the Chief Actuary Social Security Administration 

AAA meeting
November 15, 2017

## Perspective: "Aging" Not Mainly from Mortality

Aging (change in age distribution) mainly due to drop in birth rates

## Mortality Decline Varies Over Time

## Conditions: Antibiotics/economy 1936-54; Medicare/Medicaid 1968-82

## Appropriate Data: by Age Critical

## Age-gradient in past reduction is clear

Recent Historical Average Annual Rates of Reduction in Mortality 1982 to 2009

## Mortality Decline by Cause of Death:

Rate of change from 1979 to 2013

## Mortality Experience: Ages 65 and Older

## Reductions since 2009 continue to fall short of expectations

## Mortality Experience: Ages Under 65

 Actual increase since 2010

## Developing Assumptions by Cause

- Scientific approach reflecting biology
- Trustees and SSA/OCACT develop in consultation with other experts
- Johns Hopkins recent survey of medical researchers and clinicians came to very similar medium term expectations-independently
- Trustees' medium-term rates by cause had not been published

## Cardiovascular: JHU Less Optimistic than Trustees over Age 50 for Next 30 Years

## Respiratory: JHU More Optimistic under Age 50, Less Optimistic over Age 85

## Cancer: JHU Very Similar to Trustees' Expectations

## How Future Conditions Might Change

-Smoking decline for women

- Started and stopped later than men
- Obesity-sedentary lifestyle
- Difference by income/earnings
$\rightarrow$ Health spending-must decelerate
- Advances help only if apply to all
- Human limits
- Increasing understanding of deceleration

## Trends in Obesity: US 1971-2006

Sam Preston 2010—must consider cumulative effects Increasing duration of obesity for aged in future

Death Rates Vary by Career Earnings Ranking Difference has increased

Female 65-69 Retired-Worker Relative Death Rates by AIME Quartile

## Mortality Decline by Education

Must be careful on changing shares (Bound 2014)

## Health Spending Cannot Continue to Rise at Historical Rates

## Note Trustees’ deceleration

Annual Percent Change in Medicare Cost per Beneficiary
Relative to GDP per Worker: 2015 TR

## Is There an Omega?

It appears we are rectangularizing the survival curve?
